

## OUR ROAD TO NEW LIFE STYLES

VENKATESH.G.PUJARI

Guest Lecturer at Dept. of Political Science, Gulbarga University, Gulbarga.

### Abstract:

#### ***1. India Shining:***

*After independence we have made great strides. Our growth in several fields are phenomenal. We have had trick in Moon mission. We have designed and launched our own satellites. We build and run our nuclear reactors. We generate our own power. Our industry growth in all sectors is phenomenal. The credit for this goes to all political leaders, all secretaries, all dreamers and visionaries whose ideas shaped India as exists now.*

### KEYWORDS:

LIFE STYLES , independence , India Shining , Employment Status ,

### INTRODUCTION:

#### **2. INDIA BLEEDING:**

While our progress is great we are lacking on many fronts. Remember there are only 32 million tax payers in India. One third of world's poor live in India. According to the new estimates, India had 456 million people living below the new International poverty line of \$1 .25 per day. The number of Indian poor also constitute 33% of the global poor.

### EMPLOYMENT STATUS:

Added to this inefficiency in capitalism we add 15 million every year to our population. New jobs are created to the extent of 7 million by the government, it is a very large figure. It is more than half of Australia. But then, 7 million or more are added to the unemployed lot. We fear large scale modernisation in agriculture. Because this will throw out many more agriculture workers onto the streets searching for work.

Look at the distribution of people by 2020. India will have 1300 million people by then. Those who need schools and colleges will be 490 million. Retired will be 57 million. Those who need employment will be 772 million.

Going by the present statistics capitalism can employ about 507 million. Unemployed will stand at 260 million. Here again in agriculture sector under capitalism will employ 288 million. By modernisation we can reduce the manpower to 153 million at the same time we can double the produce. If we do this then capitalism employs a meager 372 million. The unemployed will rise to 395 million.

#### **FIGHT OF FARMERS:**

Look at agriculture. In the 1930s, about 25% of the US population resided on the nation's 6,000,000 small farms and produced enough food for all of them. In India today we have 65% population on farms. We still struggle to feed every one. Look at the number of death of these poor farmers. "More than 17,500 farmers a year killed themselves between 2002 and 2006, according to experts who have analysed government statistics. At least 160,000 farmers have committed suicide since 1997, experts say."

Look at our education system. Our students run pillar to post to get education, to pay their fees and to manage themselves during education. After all this is over they run door to door for jobs.

Very few live happily in old age. Majority has to depend upon their children, friends and relatives. Most of our employed people are in un-organised sector. While 32 million could be happy but for the rest about 1100 million it is a night mare. Al? this makes us believe "India is bleeding".3. End of Road:

Capitalism has many ills. It cannot solve our problem of unemployment. It cannot solve large scale inequality. Under capitalism debt trap lay ahead for the government. It cannot bring social justice to 1000 million.

#### **INEQUALITY IS RISING DUE TO CAPITALISM:**

Inequality is nothing new to capitalism. According to a report by the Washington- based Institute of Policy Studies (IPS). "the combined sales of the world's top 200 MNCs is now greater than the combined GDP of all but the world's nine largest national economies. Yet, the total direct employment generated by these multinationals is a mere 18.8 millions — one hundredth or one per cent of the global workforce."

#### **COMMUNISM CANNOT TAKE US BEYOND:**

Since capitalism is not solving our problems can we turn to communalism? Look at your own children when you boss over them they retort, they rebel, they tight and they do not like it. If it so how can a grown up man can tolerate this model. Even in communist countries the drift has already made a beginning. Communism has fallen in Russia. China is slowly changing over to capitalistic methods in running its industries. Then how can any one say let us take to communism.

#### **OUR TARDY POLITICAL ATMOSPHERE:**

Over and above all these problems we have another problem. We are following democracy. We elect our own leaders Unfortunately very few of these elected leaders work for the betterment of the people. "Politics has become big business... The returns in 'political businesses' are higher than the pay back in any other business'. "The analysis of the re-contesting candidates for the last Lok-Sabha elections revealed that the average asset value increase of all these, MPs was 287 per cent, equal to Rs. 2.75 crore for each M.P. The maximum asset increase was 9,137 per cent." Statistics from 'Election Watch' indicates that 150 M.Ps in the current parliament have criminal records... There are 72 M.Ps with serious criminal charges.

#### **CORRUPTION IN GOVERNMENT OFFICES:**

For any thing from the government we have to pay bribe. We have reached the end of the road.

#### **4. NEW ECONOMIC MODEL FOR NEW AGE:**

World over the search is going on to find an alternative to capitalism. Most of the economic models that are proposed in USA and elsewhere are very good, but have not crossed the level of dreams and visions. This new model for new age is based on three simple concepts.

- (i) Methods of capitalism as we are using now.
- (ii) Co-operative effort which we are all aware of it.
- (iii) Post dated cheques with which we are familiar.

#### **ECONOMIC NUCLEAR POWER:**

This fusion releases economic nuclear power in India that changes our living styles. Let us see of these in, "Our New Life Styles".

#### 5. SEVEN STEPS TO REACH THE GOAL:

There are only seven steps to reach the goal.

Step 1: Employ all who want work.

Step 2: Work out salary structure.

Step 3: Work out goods and services they get.

Step 4: Assess the total demand and produce.

Step 5: Work out a method to pay their salaries.

Step 6: Stream line goods distribution method.

Step 7: Work out time frames to supply items.

#### 6. OUR NEW LIFE STYLES:

Under “Reverse Principle” we are employing all. We pay each one Rs. 9,000 at the lowest end. With this salary they get housing, transport and all the day to day requirements. Old age pension after retirement. They get their ration etc., through “Easy uy” supply chains which are organized in the lines of Subhiksha. Banks work on ingle window system for all our financial 'transaction. Post Offices work on single window system for all our documentation work. Every student scales the peas based upon has merit. There is no financial constrains any where. Jobs L 1ore student leaves the school or college. Tourism for every one. There are host f other benefits.

Every village plans their requirements and build them. They draw required funds from reverse currency and build, parks roads in their village, shopping complexes and other requirement. Government interference does not exist. That is how we have the Swaraj of Mahathma Gandhi. 7. New Governance:

Under New governance every thing works on E-conveyance. You get the information at the click of the mouse. You start a new venture through e-registration. All approvals and clearances comes through e—sanctions. Elections are stream lined. Government taken care of the election publicity for all candidates and all parties.

#### 8. RISK FACTORS:

Changing over to “Reverse Principle” has only one risk factor. We have to produce 400 million six square flats for couples, 500 million laptops for children going to schools, 400 million laptops for workers, 400 million computers for schools and colleges, 200 million hostel rooms for students, 1000 million TV sets, 1000 million mobile phones, 800 million battery operated two wheelers for all working people, 200 million flats for tourism. Over and above we have to meet the increased demand for food, cloths and consumer items.

To over come this problem we sequence them. But then in the process we can make sure that every body gets some thing on other every year.
